

“ExPrep gave me the ability to give my students independence in their practice”

Fernando Parra

- Accounting Professor teaching Accounting Information System and Cost Accounting for a few years)
- Been using ExPrep for about 2 years
- Redesign course to integrate the Excel skills they would need for the job. Felt responsible to prep students before interviews/jobs
- Ability to give students independence when practicing since students coming in with all different skill levels. ExPrep allows walk through step by step and give students ability hands-on practice for many individual modules. Also, learning shortcut keys

Problem

Students should have proper technical skills but by the time they come to a higher-level course, students often forgot these skills. Students needed more practice in Excel; students were missing ability to work with spreadsheets after graduating. Should be integrating more of these skills throughout the curriculum

Solution

ExPrep allows students to have more Excel practice without needing to grade hundreds of hours.

Result

Can translate skills into job roles immediately. ExPrep given ability to keep practicing and keep skills fresh.
